DETAILED ACTION

Allowable Subject Matter

1. Claims 1-14 are allowed.

2. The following is an examiner's statement of reasons for allowance:

The present invention is directed to a method, and a system of tone correction for a display device. The prior arts in the record fail to teach or make obvious to a method and a system comprising a tone correction circuit coupled to receive pixel data compute tone corrected pixel data using one or more tone correction curves, wherein said tone correction circuit computes tone corrected pixel data for a first pixel by generating a pixel mask of pixels surrounding said first pixel, the pixel mask classifying neighborhood of pixels to a first value and a second value according to one or more threshold values, applying a blending mask of weight factors to said pixel mask and computing a selector value based on said pixel mask and weight factors associated with said blending mask, said selector value being used to derive a first tone correction curve for use to compute said tone corrected pixel data for said first pixel, and wherein the selector value is computed by counting the number of first values in the pixel mask corresponding to a respective weight factor in the blending mask, multiplying each count value by the respective weight factor, and summing the count-weight factor products to obtain the selector value within a structure of the claim. These features are claimed in the independent claims 1 and 8 and render them allowable.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
